

Ageing & Society

...is an interdisciplinary and international journal devoted to the understanding of human ageing and the circumstances of older people in their social and cultural contexts. It draws contributions and has readers from many academic social science disciplines, and from clinical medicine and the humanities. In addition to original articles, *Ageing & Society* publishes book reviews, occasional review articles and special issues.

Editor:

Tony Warnes

University of Sheffield, UK

...is important reading for:

lecturers and researchers in social sciences & cultural studies

social gerontologists

students of ageing

social service health professionals

governmental departments

The Journal of The Centre for Policy on Ageing, and The British Society of Gerontology

The International Journal of Technology Assessment in Health Care
is the official journal of HTAi.

Health Technology Assessment International

Health Technology Assessment International (HTAi) is **the** international society
for the promotion of Health Technology Assessment.

As an HTAi member you will:

*Receive reduced price access to the International Journal of Technology
Assessment in Health Care, the leading peer reviewed journal of HTA.*

*Be able to attend the annual HTAi conference to meet with peers, participate in
panel discussions on critical issues in HTA, and present your research topics.*

*Build collaborative work spaces on the HTAi website to network
with HTA producers and users.*

Receive unparalleled access to a network of 1,000 HTA peers world wide.

Join a Special Interest Group on specific aspects of HTA.

International Journal of Technology Assessment in Health Care

Instructions for Contributors

The editors welcome submissions of articles that deal with the wide range of topics related to assessment for health care policy and practice, including issues of technology diffusion, economics, ethics, law, and social and cultural perspectives. All manuscripts are screened by the Editors and members of the Editorial Board. Those that pass proceed to an international review process, which usually is completed within 4 to 10 weeks. Accepted manuscripts will be published within 4 to 6 months. Articles must be in English. Spelling, capitalization, and punctuation should conform to the 15th Edition of *The Chicago Manual of Style* (University of Chicago Press). Articles and correspondence should be sent *by email only* to **Egon Jonsson** at the following email address: ejonsson@ihe.ca; Egon Jonsson Ph.D, Professor; Executive Director and CEO; Institute of Health Economics; 1200, 10405 Jasper Avenue; Edmonton, Alberta; Canada T5J 3N4; Email address: ejonsson@ihe.ca; Telephone: +1-780-448-4881; Fax: +1-780-448-0018.

PREPARATION OF MANUSCRIPT. The entire manuscript (in word format), including all notes and references, must be typed, *double-spaced* on 8½ × 11 inch or A4 paper, with at least 1-inch (2.54 cm) margins. Manuscript pages should be numbered consecutively. Manuscripts should be arranged as follows: 1) cover sheet with title and short title; 2) abstract and key words; 3) acknowledgments, including source of funding; 4) text; 5) references; 6) tables with titles; and 7) figures, with captions on a separate page. Manuscripts should typically have *no more than 4,000 words*—including the abstract, which should not exceed 250 words. There should be no more than a total of four tables and illustrations together and no more than 25 references. Tables and illustrations exceeding these limits may be posted on the Journal's web site (www.journals.cambridge.org/thc) as supplementary materials. Supplementary figures and tables should be numbered separately from the figures and tables in the printed issue, beginning with Supplementary Figure 1 and Supplementary Table 1. Where relevant, all manuscripts should include one paragraph on the policy implications of the findings of the study. Acronyms should be clearly spelled out on first use. The use of product trade names should be avoided; generic names should be used except where discussion of proprietary brands is essential to the manuscript.

COVER SHEET AND COVER LETTER. A cover letter, signed by all authors, must attest that 1) each named author contributed to both the conception/design and/or analysis/interpretation of the project and the writing of the paper; 2) each has approved the version being submitted; and 3) the content has not been published nor is being considered for publication elsewhere.

As relevant to the content of the paper, the letter should also attest to the fact that any research with human or animal subjects conforms to the legal and standards of the country in which it was performed. *All authors must disclose any financial arrangements with companies whose products are discussed in the paper or their competitors*; such information will not be revealed to reviewers but may be included in a suitable format in the final publication if the manuscript is accepted. The cover letter should also provide all authors' full names, professional degrees, and institutional mailing addresses.

The cover sheet should list the article's title, the name, complete mailing address, telephone and fax numbers, and e-mail ad-

dress of the corresponding author, and a short title (50 characters or less) for the running head.

ABSTRACT AND KEYWORDS. A 100- to 250-word abstract, submitted on a separate page, should *summarize* the objectives of the study or analysis, the article's major arguments and/or results, and its conclusions/recommendations. *Abstracts must be submitted in four sections: Objectives; Methods; Results; and Conclusions*, except where the subject and/or format of the article do not permit. Three to five key words, using terms from the Medical Subject Headings from *Index Medicus*, should follow the abstract.

REFERENCES AND NOTES. Bibliographic citations in the text should be indicated by numbers in parentheses usually at the end of the sentence after the period. When authors are mentioned in the text, the citation number should immediately follow the name(s) as follows: ***In-text citations:*** "Jones and Smith (7) maintained that. . ." *The reference list must be in alphabetical order* If a work has more than five authors, the first three authors should be listed, followed by et al. Abbreviate journal titles according to the listing in the current *Index Medicus*.

Book: 1. Jones AB, Smith JK. *Computer diagnosis and results*. New York: Penta Publishers; 1998.

Journal: 1. Jones AB, Smith JK. The relationship between health needs, the hospital, and the patient. *J Chron Dis*. 1995;32:310-312.

Article in edited work: 1. Jones AB, Smith JK. The diagnostic process. In: Brown R, Wilson T, eds. *New technology and its medical consequences*, vol. 1. New York: Apple Publishers; 1992:101-134.

In the reference list, do not include material that has been submitted for publication but has not yet been accepted. This material, with its date, should be noted in the text as "unpublished data" as follows:

Unpublished data: "Similar findings have been noted by L. W. Smith (unpublished data, 1998)."

The Journal does not accept footnotes or appendices.

TABLES AND FIGURES. Tables and figures should be numbered consecutively. All tables and figures must have a caption and must be cited in the text. Abbreviations in tables and figures should be avoided, except in the case of acronyms already used in the text. Table footnotes appear directly after the table; table references follow the footnotes. Figures must be submitted in Excel, PageMaker, or equivalent.

PERMISSIONS. Authors are responsible for obtaining written permission to publish material for which they do not own the copyright. Contributors will be asked to assign their copyrights to Cambridge University Press.

COPYEDITING AND PROOFREADING. The publishers reserve the right to copyedit and proofread all accepted articles. Page proofs will be sent to the lead author for final review.

REPRINTS. The lead author will receive 25 reprints free of charge; additional numbers may be purchased if ordered at proof stage.

International Journal of
**TECHNOLOGY ASSESSMENT
IN HEALTH CARE**

Featured in this Issue

“Comparative effectiveness research priorities: Identifying critical gaps in evidence for clinical and health policy decision making,” by Kalipso Chalkidou, Danielle Whicher, Weslie Kary, and Sean Tunis

“Scanning the horizon of obsolete technologies: possible sources for their identification,”
by Nora Ibarгойen-Roteta, Iñaki Gutierrez-Ibarluzea, José Asua, Gaizka Benguria-Arrate,
and Lorea Galnares-Cordero

“The process of updating the National List of Health Services in Israel: Is it legitimate? Is it fair?”
by Dan Greenberg, Miriam I. Siebzeher, and Joseph S. Pliskin

“Effects of the National Institute for Health and Clinical Excellence’s technology appraisals on prescribing and net ingredient costs of drugs in the National Health Service in England,” by Eva Susanne Dietrich

“Perspectives on the National Institute for Health and Clinical Excellence’s recommendations to use health technologies only in research,” by Irfan A. Dhalla, Sarah Garner, Kalipso Chalkidou, and Peter Littlejohns

“Percutaneous pulmonary and aortic valve insertion in Belgium: Going for conditional reimbursement or waiting for further evidence?,” by Mattias Neyt, Imgard Vinck, Marc Gewillig, and Hans Van Brabant

“A successful practical application of Coverage with Evidence Development (CED) in Australia:
Medical Services Advisory Committee interim funding of PillCam® Capsule Endoscopy Register,”
by Sue P. O’Malley, Warwick S. Selby, and Ernest Jordan

“Wireless capsule endoscopy in Italy: Adding context-specific data to the review of the evidence from literature,” by Alessandra Lo Scalzo, Marco Ratti, Tom Jefferson, Fabio Bernardini, and Marina Cerbo

“Methods, procedures, and contextual characteristics of health technology assessment and health policy decision-making: Comparison of health technology assessment agencies in Germany, United Kingdom, France, and Sweden,” by Ruth Schwarzer and Uwe Siebert

“Surrogate outcomes in health technology assessment: An international comparison,”
by Marcial Velasco Garrido and Sandra Mangiapane

“Inadequate reporting of trials compromises the applicability of systematic reviews,” by Gerald Gartlehner, Patricia Thieda, Richard A. Hansen, Laura C. Morgan, Janelle A. Shumate, and Daniel B. Nissman

“Economic evaluation of continuous renal replacement therapy in acute renal failure,” by Scott Klarenbach, Braden Manns, Neesh Pannu, Fiona M. Clement, Natasha Wiebe, and Marcello Tonelli
for the Alberta Kidney Disease Network

“Home telehealth for chronic disease management: A systematic review and an analysis of economic evaluations,” by Julie Polisen, Doug Coyle, Kathryn Coyle, and Sarah McGill

“A cost-effectiveness analysis of a community-based diabetes prevention program in Sweden,” by Pia Johansson, Claes-Göran Östenson, Agneta Hilding, Camilla Andersson, Clas Rehnberg, and Per Tillgren

“A valuation of patients’ willingness-to-pay for insulin delivery in diabetes,” by Camila Guimarães, Carlo A. Marra, Lindsey Colley, Sabrina Gill, Scot H. Simpson, Graydon S. Meneilly, Regina H. C. Queiroz, and Larry D. Lynd
