

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a short abstract of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of keywords detailing the contents; and (iii) a list of classifications, using the 2020 Subject Classification scheme (mathscinet.ams.org/mathscinet/msc/msc2020). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from appliedprobability.org. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Volume 61 Number 4

Original Articles

- 1107 PÉTER KEVEI AND KATA KUBATOVICS. Branching processes in nearly degenerate varying environment
- 1127 AIZELLE ABELGAS, BRYAN CARRILLO, JOHN PALACIOS, DAVID WEISBART AND ADAM M. YASSINE. Buffon's problem determines gaussian curvature in three geometries
- 1139 QUNQIANG FENG, SHUAI GUO AND ZHISHUI HU. Average jaccard index of random graphs
- 1153 RITA GIULIANO, CLAUDIO MACCI AND BARBARA PACCHIAROTTI. Asymptotic results for sums and extremes
- 1172 SHIYU SONG AND GUANGLI XU. Skew Ornstein–Uhlenbeck processes with sticky Reflection and their applications to bond pricing

Letter to the Editor

- 1196 TAKUJI ARAI AND YUTO IMAI. A remark on exact simulation of tempered stable Ornstein–Uhlenbeck processes

Original Articles

- 1199 SHIGEO SHIODA AND KANA NAKANO. Inequalities between time and customer averages for Hnb(W)UE arrival processes
- 1220 TAKUJI ARAI AND MASAHIKO TAKENAKA. Constrained optimal stopping under a regime-switching model
- 1240 STANISŁAW CICHOMSKI AND ADAM OSĘKOWSKI. Coherent distributions on the square–extreme points and asymptotics
- 1263 ZE-AN NG, YOU-BENG KOH, TEE-HOW LOO AND HAILIANG YANG. Super-replication of life-contingent options under the Black–Scholes framework
- 1278 NA LIN AND YUANYUAN LIU. Perturbation analysis for continuous-time markov chains in a weak sense
- 1301 JIANGHAO LI, HUANCHAO ZHOU, ZHIDONG BAI AND JIANG HU. The limiting spectral distribution of large random permutation matrices
- 1319 MING CHENG, DIMITRIOS G. KONSTANTINIDES AND DINGCHENG WANG. Multivariate regularly varying insurance and financial risks in multidimensional risk models
- 1343 MARIA DEIJFEN AND RICCARDO MICHIELAN. Geometric random intersection graphs with general Connection probabilities
- 1361 JAMES P. HOBERT AND KSHITIJ KHARE. Recurrence and transience of a Markov chain on \mathbb{Z}^+ and evaluation of prior distributions for a Poisson mean
- 1380 DAVID DEREUDRE AND DANIELA FLIMMEL. Non-hyperuniformity of gibbs point processes with Short-range interactions
- 1407 FERENC FODOR AND NICOLÁS A. MONTENEGRO PINZÓN. Series expansions for random disc-polygons in smooth plane convex bodies
- 1424 FRANÇOIS DUFOUR AND TOMÁS PRIETO-RUMEAU. Maximizing the probability of visiting a set infinitely often for a markov decision process with borel state and action spaces
- 1448 COLIN DESMARAIS. Depths in random recursive metric spaces
- 1463 MANON COSTA, PASCAL MAILLARD AND ANTHONY MURARO. (Almost) complete characterization of the stability of a discrete-time hawkes process with inhibition and memory of length two
- 1485 RITIK SONI, ASHOK KUMAR PATHAK, ANTONIO DI CRESCENZO AND ALESSANDRA MEOLI. Bivariate tempered space-fractional Poisson process and shock models
