Health Economics, Policy and Law

Published in association with LSE Health

Editor-in-Chief

Adam Oliver, *London School of Economics and Political Science, UK*

International trends highlight the confluence of economics, politics and legal considerations in the health policy process. *Health Economics, Policy and Law (HEPL)* provides a forum for inter-disciplinary health policy studies, and will be of use to academics, policy makers, health care managers and professionals. *HEPL* is international in scope, publishing both theoretical and applied work, with articles on all aspects of health policy. *HEPL* is particularly interested in publishing innovative ideas that promise to contribute to improving health and healthcare policy. Considerable emphasis is placed on rigorous conceptual development and analysis, and on the presentation of empirical evidence that is relevant to the policy process. Review articles and debate sections bring readers in touch with current research developments and issues.

Cover Artwork

Transcending, an acrylic painting by Randell Otis

Artist's Statement

Transcending is a 16"x20" acrylic painting based on a meditation theme. The objective in most of my paintings is to convey the essence of a subject or theme by simplifying its elements into a design composition that transforms the work into something unique. Most of my paintings evolve from drawing several variations of the subject or theme, then designing and stylizing the work into a complete composition. I primarily work in acrylics because of their fast drying time which allows me to lay in color quickly and rework areas as needed. The color schemes evolve as the painting develops and I'm constantly experimenting with different color combinations to create rich tones of layered colors. The intention is to give the viewer a different perspective.

Mr. Otis can be reached at +1 608-835-8489 or randell_otis@fastmail.us.

Aims and Scope: The mission of *Prehospital and Disaster Medicine* (PDM) is the distribution of information relevant to the practice of out-of-hospital and in-hospital emergency medical care, disaster health, and public health and safety. PDM provides an international forum for the reporting and discussion of scientific studies, both quantitative and qualitative, that have relevance to the above practices. The major objectives are: (1) the improvement of the types and quality of the care delivered to patients with perceived medical emergencies and to victims of multi-casualty accidents or disasters, including the public health and safety aspects of such events; and (2) the prevention and/or mitigation of the occurrence of such events and of the effects of these events upon the human population and environment.
