Parasites and molecular biology: applications of new techniques

Edited by A. J. G. Simpson

SUBSCRIPTIONS may be sent to any bookseller or subscription agent or direct to Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA and Canada should be sent to Cambridge University Press, 32 East 57th Street, New York, NY 10022. All orders must be accompanied by payment. The subscription price of volume 92, 1986, is £63.00 net (including postage) for a volume of four parts (US \$148.00 in the USA and Canada) and for volume 93, 1986, £47.00 net (including postage) for a volume of three parts (US \$112.00 in the USA and Canada) payable in advance (£110.00 or US \$260.00 per year), separate parts cost £17.00 net or US \$41.00 each (plus postage). *Second class postage paid at New York, NY and at additional mailing offices.* POSTMASTER: send address changes in USA and Canada to Cambridge University Press, 32 East 57th Street, New York, NY 10022. ISSN 0031-1820.

CONTENTS

<i>Preface</i>	S1
<i>List of contributions</i>	S2
<i>Opening remarks</i>	S3
An introduction to recombinant DNA technology	S7
Introduction	S7
Genes	S7
Gene manipulation	S8
Vectors	S10
Gene identification	S11
Gene expression	S13
Bibliography	S14
Molecular characterization of antigens of lymphatic filarial parasites	S15
Introduction	S15
The disease spectrum	S15
(1) Does specific tolerance reduce disease?	S16
(2) Does immunity occur?	S17
Filarial antigens	S18
(1) Surface-associated components of <i>Brugia malayi</i> and <i>Brugia pahangi</i>	S18
(2) Immunological recognition: potential association with immunity in man	S22
(3) Cross-reactivity between different species of parasitic nematodes	S24
Analysis of secreted molecules and their potential use in diagnosis of filarial infection	S26
Molecular cloning of target antigen genes: utility of genetically engineered products	S30
References	S34
The cloning of schistosome genes encoding antigenic and maturation-linked polypeptides	S39
Introduction	S39
The definition of target antigens on the schistosomula and an approach to the cloning of their genes	S40
The cloning of antigen genes by screening expression libraries with antibodies	S42
The cloning of polypeptides highly expressed by mature egg-laying female schistosomes by screening gene libraries with sex-specific cDNA	S45
Conclusions	S49
References	S50
The application of recombinant DNA technology to problems of helminth identification	S53
Introduction	S53
Characterization of schistosomes	S54
The ribosomal RNA gene family of <i>S. mansoni</i>	S55
Differentiation of schistosomes using cloned segments of the ribosomal gene as probes	S58
(1) <i>S. mansoni</i>	S58
(2) <i>S. haematobium</i> and related species	S58
Usefulness of DNA data for schistosome characterization studies	S62

Characterization of other helminths by DNA analysis	S65
(1) Cestodes	S65
(2) Nematodes	S67
Concluding remarks	S68
References	S69
Molecular cloning of schistosome genes	S73
Introduction	S73
What genes to clone?	S73
Some interesting clones identified	S74
Expression of schistosome cDNA clones	S77
Future prospects	S80
References	S80
The Wellcome Trust Lecture	
Genes for antigens of <i>Plasmodium falciparum</i>	S83
Recent technical developments in the study of malarial antigens	S83
(1) Cloning genes for <i>Plasmodium falciparum</i> blood-stage antigens	S83
(2) Characterization of cloned antigens	S85
<i>P. falciparum</i> asexual blood-stage antigens and genes	S85
(1) S-antigens	S85
(2) Ring-infected erythrocyte surface antigen (RESA)	S86
(3) Mature-parasite-infected erythrocyte surface antigen (MESA)	S88
(4) Falciparum interspersed repeat antigen (FIRA)	S88
(5) Merozoite surface protein precursor (MSPP)	S89
(6) Histidine-rich and asparagine-rich proteins	S90
(7) Other repeat antigens	S91
(8) Rhoptry proteins	S92
(9) Patterns of antigen expression in asexual blood stages and gametocyte	S93
Characterization and linkage mapping of genes of <i>P. falciparum</i> antigens	S94
Generation of diversity in repetitive antigens	S96
Antigenic variation in <i>Plasmodia</i>	S98
Repetitive proteins of other organisms	S99
The smokescreen model for immune evasion by <i>P. falciparum</i>	S100
Outlook for an asexual blood-stage malaria vaccine	S102
References	S103
Vaccinia virus: an expression vector for genes from parasites	S109
Introduction	S109
Biology of vaccinia virus	S109
Strategy for construction of recombinant vaccinia viruses expressing foreign genes	S110
Expression of <i>Plasmodium knowlesi</i> circumsporozoite (CS) protein	S111
Expression of <i>Plasmodium falciparum</i> CS protein	S112
Applications of recombinant vaccinia viruses expressing antigens from pathogens	S113
(1) Live vaccines	S113
(2) Immunological tools	S115
References	S115

Antigens of <i>Plasmodium falciparum</i> blood stages with clinical interest cloned and expressed in <i>E. coli</i>	S119
Introduction	S119
Studies on the DNA of <i>P. falciparum</i>	S119
Studies on L-(+)-lactate dehydrogenase	S122
Cloning technique	S123
Isolation of the cloned gene	S124
An antigen of the blood stages cross-reacting with the circumsporozoite protein	S125
Cloning the gene for Ag5.1	S128
A major surface antigen of merozoites	S130
References	S134
The potential of using recombinant DNA species-specific probes for the identification of tropical <i>Leishmania</i>	S139
Introduction	S139
Use of kinetoplast DNA as 'complex' discriminatory probes by kDNA/kDNA hybridization	S140
(1) Southern filter hybridization	S140
(2) Dot blot and microscopic ' <i>in situ</i> ' hybridization	S142
Selection of desired sequences from endonuclease digests and Southern hybridizations	S146
(1) Isolation of 'common' and 'unique' sequences from kDNA of visceral <i>Leishmania</i> strains	S146
Selection of specific fragments by colony hybridization using kDNA	S148
(1) An alternative method of identifying recombinant clones by plasmid mini preparations	S151
Specificity of recombinant DNA probes for the <i>braziliensis</i> , <i>major/tropica</i> and <i>donovani</i> complexes	S154
(1) <i>Braziliensis</i> complex-specific recombinant probe	S154
(2) Species-specific recombinant probes, <i>major/tropica/aethiopica</i>	S155
(3) Geographically distinct isolate recognition, <i>donovani</i>	S156
(4) The specificity of the cloned Chinese unique sequence	S156
(5) Field use of Chinese-specific probes	S158
The 'common' sequence and the putative origin of replication	S158
Use of DNA sequencing in the selection of unique and common fragments by restriction enzyme site analysis	S161
Use of non-radioactive probes for filter (Southern) hybridizations	S163
(1) Use in 'field' research	S164
' <i>In situ</i> ' hybridization identification using non-radioactive probes in developing countries	S166
(1) Preparation of <i>Leishmania</i> on microscope slides for hybridization	S166
(2) ' <i>In situ</i> ' hybridization on microscope slides	S166
(3) Detection of hybridized biotinylated DNA	S167
Conclusion	S169
References	S171
