

October 1951

Vol. LXV. No. 10

The Journal of *JSM* Laryngology and Otology

EDITED BY

WALTER HOWARTH

ASSISTANT EDITOR
R SCOTT STEVENSON

WITH THE COLLABORATION OF
G. H. BATEMAN V. E. NEGUS R. G. MACBETH

Contents

- AN INTRODUCTION TO THE STUDY OF THE COMPARATIVE ANATOMY OF THE LABYRINTH OLIVER GRAY
- EXOSTOSIS OF THE EXTERNAL AUDITORY MEATUS D. F. N. HARRISON
- ADAMANTINOMAS IN RELATION TO THE NOSE AHMAD BEY HANDOUSA
- LARYNGOCHELES S. HOROWITZ
- CLINICAL RECORDS—
- A CYST OF THE LARYNGEAL VENTRICLE J. I. MUNRO BLACK
- AN UNUSUAL MEDICO-LEGAL TRAUMA AHMAD EL-HAKEEM
- SOCIETIES' PROCEEDINGS—
- ROYAL SOCIETY OF MEDICINE—SECTION OF LARYNGOLOGY
- ABSTRACTS—
- THE EAR MISCELLANEOUS
- THE LARYNX
- GENERAL NOTES

The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

WALTER HOWARTH

ASSISTANT EDITOR

R. SCOTT STEVENSON

WITH THE COLLABORATION OF

G. H. BATEMAN V. E. NEGUS R. G. MACBETH

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng. and Otol.*, 65, 33.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no additional matter added.

4. Blocks illustrating articles are normally paid for by the *Journal*. Authors may, however, be required at the Editor's discretion, to contribute towards the cost of these in cases where this is particularly heavy.

5. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD, 109 Kingsway London WC 2.

8. The annual subscription is three guineas sterling, post free, and is payable in advance.

9. Single copies will be on sale at 7s. 6d. each; copies of parts up to Vol. LXIII may be purchased at 4s. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS LTD, 109 Kingsway London WC 2.

United States of America

Orders for this *Journal* may be sent either through a local bookseller, or to Messrs. G. E. STECHERT & Co., 31-33 East 10th Street, New York, or they may be sent direct to the publishers, HEADLEY BROTHERS LTD, 109 Kingsway London WC 2, England.

AMPLIVOX MODEL 61 THE CLINICAL AUDIOMETER OF INTERNATIONAL REPUTE

"Messrs. Amplivox were among the first firms to produce an audiometer in this country, and their larger model is one of the best instruments of the kind now made in the world at a competitive price."—The LANCET, 23-12-50.

- Eleven exact test frequencies 125-12,000 c.p.s.
- Simplified hearing loss dial. The same set of figures is read for both bone and air conduction at all frequencies, and for speech.
- Bone conduction tests can be made from 125-4,000 c.p.s.
- Masking Tone calibrated in decibels, permitting accurate control of masking.
- Double Air receivers enable test tones to be switched instantly from ear to ear.
- Speech test circuit monitors speech level, permitting accurate measurement of hearing loss for speech.
- Loudness Balance Control establishes presence of recruitment in monaural deafness.
- Automatic voltage compensator.

Recruitment Test Set accessory establishes presence of recruitment by amplitude modulation, enabling each ear to be tested independently.

Speech Turntable and English-made Harvard Spondee records also available.

Full details are available from the manufacturers who will gladly arrange demonstrations if required.

The Basic Instrument of Modern Otology

ACCURATE • COMPLETE • SIMPLE TO OPERATE

**. . . AID TO
AUDIOMETRY**

The Marconi Pure Tone Audiometer was developed to meet the specifications of the Medical Research Council's Committee on Electro-Acoustics. Every instrument, by careful calibration against N.P.L. determinations, can be relied on to be functionally interchangeable with any other of this type. The patient, is instructed by crystal microphone and high fidelity ear-phones, and responds to tests by operating a signal lamp on the instrument. Sound output over the normal hearing range is automatically corrected for characteristic losses.

THE PURE TONE
Audiometer

Type TF 895

For full particulars of this efficient aid to audiometry please write:

PRESCRIBE THE EASY EFFECTIVE METHOD

When spraying, the patient can hold his head in a natural position, yet the solution spreads throughout the nasal cavity, assuring thorough treatment. Effective dropper-application, on the other hand, requires a complicated posture technique which patients are apt to neglect in home treatment.

DROPPER ?

**DeVilbiss
ATOMIZERS**

ATOMIZER ?

These illustrations, which are based on X-ray research, clearly demonstrate the advantages of the atomizer as compared with the dropper
