RECOGNIZING HS

DO YOU RECOGNIZE PATIENTS WITH HIDRADENITIS SUPPURATIVA (HS)?

DR. NEIL SHEAR
Head of Dermatology, Sunnybrook Hospital

"HS is a chronic, painful, inflammatory skin disease that affects 1-4% of the general adult population. It is characterized by boils usually occurring where certain sweat glands are located, such as under the breasts, buttocks, and inner thighs."

"People with HS come to the emergency room in severe pain and discomfort requiring assistance with the draining of the boils during a flare-up. It's not unusual for patients to go home undiagnosed."

DR. VU KIET TRAN
ER physician at University Health Network

DR. RALPH GEORGE
Associate Professor, University of Toronto,
Division of General Surgery

"There is currently no cure for HS. Early diagnosis and proper management is important for a patient's quality of life. The first step for those with HS is to speak to their dermatologist to get an accurate diagnosis."

To learn more about HS from these specialists, go to www.RecognizingHS.com/HS05

WHEN YOU SEE THESE LESIONS, DO YOU SUSPECT HS? DO YOU ASK ABOUT RECURRENCE?

Photo compliments of Dr. Afsaneh Alavi.

Photo compliments of Dr. Marc Bourcier.

ASSESSING PATIENTS WITH RECURRENT BOILS

Most HS cases can be recognized with high reliability by the presence of 3 main features:¹⁻³

- 1. Typical lesions:** nodules, sinus tracts, abscesses, scarring
- 2. Typical anatomical location:** axilla, groin, genitals, under the breasts, others (perianal, neck, abdomen, buttocks)
- 3. Relapses and chronicity:** ≥ 2 times per 6 months

Questions to ask your patients with suspected HS:²

- 1. Have you had outbreaks of boils during the last 6 months?**
- 2. Where were the boils and how many did you have?**

To confirm an HS diagnosis,
please refer your patient to a dermatologist.
