JOURNAL OF THE INSTITUTE OF MATHEMATICS OF JUSSIEU

Instructions for contributors

Editorial policy

The Journal of the Institute of Mathematics of Jussieu publishes original research papers in any branch of pure mathematics; papers in logic and applied mathematics will also be considered, particularly when they have direct connections with pure mathematics. Its policy is to feature a wide variety of research areas and it welcomes the submission of papers from all parts of the world. Selection for publication is on the basis of reports from specialist referees commissioned by the Editors.

Submission of manuscripts

Manuscripts should be submitted via the website: http://mc.manuscriptcentral.com/jimj

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and authors will receive a copyright assignment formfor signature on acceptance of the paper.

Layout of manuscripts

Insofar as possible, papers should be in some form of T_EX , preferably \LaTeX . Papers must begin with an abstract of not more than 200 words, and should list from three to six keywords and at least one 2010 mathematics subject classification number.

Authors are reminded that they should retain a copy of anything submitted for publication since neither the Journal nor the publisher can accept liability for any loss.

References

References should be placed at the end of the paper, arranged and numbered in alphabetical order of the authors' names. Titles of journals should be abbreviated as in Mathematical Reviews. In the text, reference numbers should be enclosed in square brackets to distinguish them from formula numbers, which should be quoted in round brackets.

A reference to a book should give the author, title (in italics), edition, publisher, year of publication; e.g.

[1] P. T. Johnstone, *Stone Spaces*, Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).

A reference to an article should give the author, title of article, short title of periodical (in italics), series number (if any), volume number, year, and the beginning and end pages of the paper; e.g.

[2] R. Guralnick, T. Pentilla, C. E. Praeger and J. Saxl, Finite linear groups, *Proc. London Math. Soc.* (3) **78** (1999), 167-214.

Proofreading

Prior to publication, authors will receive a set of proofs. For papers with more than one author the proofs are sent to the first named author unless the Editor receives other instructions. Authors are asked to correct and return proofs promptly. Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for excessive corrections of non-typographical errors. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

SEPTEMBER 2020 | VOLUME 19 | ISSUE 5 | ISSN 1474-7480

contents

Spectral analysis of Morse–Smale flows I: construction of the anisotropic spaces
Nguyen Viet Dang and Gabriel Rivière
Zero-loci of Brauer group elements on semi-simple algebraic groups
Daniel Loughran, Ramin Takloo-Bighash and Sho Tanimoto
A Bogomolov unobstructedness theorem for log-symplectic manifolds in general Position Ziv Ran
Symmetric power congruence ideals and Selmer groups
Haruzo Hida and Jacques Tilouine
Recovery of non-compactly supported coefficients of elliptic equations on a infinite Waveguide Yavar Kian
K3 categories, one-cycles on cubic fourfolds, and the Beauville–Voisin filtration Junliang Shen and Qizheng Yin
WKB expansions for hyperbolic boundary value problems in a strip: selfinteraction meets strong well-posedness Antoine Benoit
On typicality of translation flows which are disjoint with their inverse Przemysław Berk, Krzysztof Frączek and Thierry de la Rue
Categorical proof of holomorphic Atiyah–Bott formula
Grigory Kondyrev and Artem Prikhodko
Non-hyperbolic ergodic measures and horseshoes in partially hyperbolic homoclinic classes Dawei Yang and Jinhua Zhang
