AUTHOR INDEX

TO

MATHEMATICAL
PROCEEDINGS

VOLUMES 91 TO 100
(1982–1986)

CAMBRIDGE
1987

PREFACE

The first cumulative index to the Proceedings of the Cambridge Philosophical Society was published in 1961 and entitled *Author Index to Proceedings of the Cambridge Philosophical Society Volumes 1 to 50 (1843–1954), and Transactions of the Cambridge Philosophical Society Volumes 1 to 23 (1822–1928)*. An Index covering the Proceedings Volumes 51 to 60 (1955–1964) was published in 1967 and one covering Volumes 61 to 70 (1965–1971) in 1972.

An index covering the Proceedings Volumes 71–76 (1972–1974) and, after the change of title, the Mathematical Proceedings Volumes 77 to 80 (1975–1976) was published in 1977. The index covering volumes 81–90 (1977–1981) was published in 1982.

This present Index covers the Mathematical Proceedings Volumes 91 to 100 (1982–1986).

INDEX OF AUTHORS

- AL-HUSSAINI, A. N. & ELLIOT, R. J. Semimartingales and the empirical distribution. **96** (1984) 167–171
- AL-RASHED, A. M. & DARST, R. B. Best L_∞ -approximation of measurable, vector-valued functions. **96** (1984) 477–481
- ALDOUS, D. J. Self-intersections of random walks on discrete groups. **98** (1985) 155–177
- ALLENBY, R. B. J. T. & TANG, C. Y. Residual finiteness of certain 1-relator groups: extensions of results of Gilbert Baumslag. **97** (1985) 225–230
- ALLISON, D. On square values of quadratics. **99** (1986) 381–383
- ALPERN, S. Search for point in interval, with high-low feedback. **98** (1985) 569–578
- ALVIS, D. & LUSZTIG, G. On Springer's correspondence for simple groups of type E_n ($n = 6, 7, 8$). **92** (1982) 65–78
- ANDERSON, W. J. & MATHAI, A. M. Various representations of a generalized hypergeometric function through statistical techniques. **96** (1984) 325–330
- ANTMAN, S. S. & CALDERER, M. C. Asymptotic shapes of inflated noncircular elastic rings. **97** (1985) 357–379
Asymptotic shapes of inflated spheroidal nonlinearly elastic shells. **97** (1985) 541–549
- ANYANWU, D. U. Langer's method for a second order linear ordinary differential equation with a double pole. **91** (1982) 111–118
- APPS, A. B. Boolean powers of groups. **91** (1982) 375–395
- ARCHBOLD, R. J. Approximating maps and exact C^* -algebras. **91** (1982) 285–289
- ARGYROS, S. A. & TSARPALIAS, A. Isomorphic embeddings of $l_1(\Gamma)$ into subspaces of $C(\Omega)^*$. **92** (1982) 251–262.
- ARTHAN, R. D. Localization of stable homotopy rings. **93** (1983) 295–302
- ARTHURS, A. M. & WALSH, G. R. On Hammersley's minimum problem for a rolling sphere. **99** (1986) 529–534
- ATANACKOVIC, T. M. & DJUKIC, DJ. S. An extremum variational principle and error estimate procedure for $q^{IV} = f(q, x)$. **92** (1982) 307–316
- ATKIN, C. J. A note on the algebra of Poisson brackets. **96** (1984) 45–60
- BAE, J. S. & CHOI, S. K. A note on k -uniformly convex spaces. **97** (1985) 489–490
- BAGLEY, R. W. & YANG, J. S. Semidirect products of central groups and groups with equal uniformities. **92** (1982) 239–241
- BAKER, R. C. & HARMAN, G. Unbalanced quadratic residues and non-residues. **98** (1985) 9–17
- BALANDA, K. P. Maximally almost disjoint families of representing sets. **93** (1983) 1–7
- BALL, J. M. & SCHAEFFER, D. G. Bifurcation and stability of homogeneous equilibrium configurations of an elastic body under dead-load tractions. **94** (1983) 315–339
- BANASCHEWSKI, B. & BHUTANI, K. R. Boolean algebras in a localic topos. **100** (1986) 43–55
- BĂNICĂ, C. & PUTINAR, M. On complex vector bundles on rational threefolds. **97** (1985) 279–288
- BARBOUR, A. D. Poisson convergence and random graphs. **92** (1982) 349–359
- BARBOUR, A. D. & HALL, P. On the rate of Poisson convergence. **95** (1984) 473–480
- BARNETT, C. & LYONS, T. Stopping non-commutative processes. **99** (1986) 151–161
- BARNETT, C., STREATER, R. F. & WILDE, I. F. Stochastic integrals in an arbitrary probability gauge space. **94** (1983) 541–551
- BASKAN, T. & MACBEATH, A. M. Centralizers of reflections in crystallographic groups. **92** (1982) 79–91
- BASTON, V. J. & BOSTOCK, F. A. A High-Low search game on the unit interval. **97** (1985) 345–348
- BATTY, C. J. K. Some properties of maximal measures on compact convex sets. **94** (1983) 297–305
Topologies and continuous functions on extreme points and pure states. **98** (1985) 501–511
- BAUMSLAG, G. Free subgroups of certain one-relator groups defined by positive words. **93** (1983) 247–251
- BAXTER, L. A. Continuum structures. II. **99** (1986) 331–338

THE PREPARATION OF MANUSCRIPTS

The attention of authors is particularly directed to the following requests.

1. Papers should be typed, double-spaced, on one side of white paper (of which A4, 210 by 297 mm, is a suitable size). The pages must be numbered. Margins of 30 mm should be left at the side, top and bottom of each page. Two clear copies should be sent.

A cover page should give the title, the author's name and institution, with the address at which mail is to be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas *Some applications of a theorem of G. H. Hardy* would be useless).

The first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician).

The following notes are intended to help the author in preparing the typescript. New authors may well enlist the help of senior colleagues, both as to the substance of their work and the details of setting it out correctly and attractively.

2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to enlighten the task of the compositor and reduce the chance of error.

For instance n_k (n sub k) is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like

$$\exp \{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

In the manuscript, italics, small capitals and capitals are specified by single, double and triple underlinings. Bold-faced type is shown by wavy underlining; wavy will be printed **wavy**.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , \circ , \bullet , \circlearrowleft ; x , X , \times ; ϕ , Φ , \emptyset ; l , L , 1 ; ϵ , \in ; κ , k .

Greek letters can be denoted by Gk in the margin.

If an author wishes to mark the end of the proof of a theorem, the sign **I** may be used.

Footnotes should be avoided.

3. Diagrams

It is extremely helpful if diagrams are drawn in Indian ink on white card, faintly blue or green-lined graph paper, or tracing cloth or paper. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript:

Figure 1 here

The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The Society recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and it is therefore willing to have such diagrams re-drawn, provided that they are clear.

4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

- [1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20–104.
