animal

Published for The Animal Consortium
www.animal-journal.eu

Editor-in-Chief

Michel Doreau, *INRA, Clermont-Theix, France*

animal publishes original cutting-edge research, 'hot' topics and horizon-scanning reviews on animal-related aspects of the life sciences at the molecular, cellular, organ, whole animal and production system levels.

The main subject areas include: breeding and genetics; nutrition; physiology and functional biology of systems; behaviour, health and welfare; farming systems, environmental impact and climate change; product quality, human health and well-being.

British Society of Animal Science
Association of Veterinary Teaching and Research Work

The British Society of Animal Science aims to provide an opportunity for those with an interest in animals and animal science to exchange views, ideas and information. It is an energetic and active society with about 1000 members from over 50 countries throughout the world. Today, as ever, the Society is the natural meeting point for all of those with an interest in animal science. Its membership is drawn from research, education, advisory work, commerce and practical animal keeping.

The Society's Journal is *Animal* which publishes high quality fundamental and applied research and is an exciting international journal of animal bioscience. *Animal* publishes cutting edge research, hot topics and horizon-scanning reviews on animal-related aspects of the life sciences.

The Society organises major scientific and specialist conferences on key issues facing the science related to animals.

If you would like to join or receive further information about the British Society of Animal Science contact:

International Society
for Equitation Science

ISES CONFERENCE 2012

University of Edinburgh

18-20 July

EQUITATION SCIENCE: 'The Road Ahead'

The conference theme, '**Equitation Science - The Road Ahead**', will showcase how equitation science has developed as a discipline to provide an international forum in which scientists and professional practitioners can communicate and discuss the results of research related to training, management and the performance of the horse.

Equitation science involves high quality translational research aiming to improve horse welfare through the application of scientific principles addressing all areas of equitation including the horse and the handler/rider/driver/trainer.

ISES UK 2012 promises to be doubly special – firstly because the conference takes place in Olympic year in the UK – and also because it marks the tenth anniversary since Equitation Science was first recognised as a field of study. The three day international conference will be held from July 18th to 20th, hosted by the University of Edinburgh's, Royal (Dick) School of Veterinary Studies in Edinburgh, Scotland. The Royal (Dick) School of Veterinary Studies, established in 1823, is a world leader in veterinary education, research and practice. And integrated into the Vet school is the new Jeanne Marchig International Centre for Animal Welfare Education (JMICAWE) which is committed to improving the quality of life for all animals through education, training and by influencing policy at the highest level.

ANIMAL BRIEFS

Revealing the facts behind the issues in livestock farming

Indoor housing of dairy cows, methane emissions from sheep and cattle and the use of hormones in meat are just some of the contentious subjects in livestock production today.

As many of these issues are emotive, the facts often risk being left behind or distorted by pressure groups and campaigners.

The British Society of Animal Science has compiled a series of articles to look at the truth behind some of the hottest topics in livestock farming.

Taking the latest research and technology, BSAS has created Animal Briefs - a short summary which gives a balanced view of issues in animal science and agriculture.

Aimed as a starting point for journalist, policy-maker and consumer research, Animal Briefs are there to offer unbiased information to allow you form your own opinions.

Subjects covered so far include:

- **Continuous housing of dairy cows**
- **Hormones in meat**
- **Methane from ruminant livestock**
- **Using genomics to improve dairy cattle**
- **Bracken**
- **Wild-flower meadows**

Animal Briefs are available on the BSAS website at http://www.bsas.org.uk/Animal_Briefs

Further issues will be featured in coming months, but if there are particular subjects you would like to see covered, email your suggestions to bsas@sac.ac.uk.

Advances in Animal Biosciences

Published for The Animal Consortium
www.animal-journal.eu

Advances in Animal Biosciences is an associated publication to the journal *animal*. It aims to publish high quality conference, symposium and workshop proceedings on animal-related aspects of the life sciences with emphasis on farmed and other managed animals. These can be in the form of a book of abstracts, summaries or complete papers. The format will highlight the title of the meeting and organisations involved but the publications will have the added advantage of forming a series under '*Advances in Animal Biosciences*'.
