Forces and Fields

MARY B. HESSE MA MSc PhD

The study of the concept of Action at a Distance in the history of Physics. This book examines the philosophy underlying scientific investigations; it is an inquiry into the logical functions of concepts, methods and theories and their status relative to experiment. It traces through history some of the problems raised by one theoretical question: "How do bodies act on one another across space?"

The Natural Philosophy of Time

G. J. WHITROW MA DPhil

The object of this book is to fill a serious gap in the literature on the problem of time. The book ranges from the psychological investigation of our conscious awareness and judgement of time to the abstract mathematical analysis of the temporal continuum of physics, from the peculiar temporal properties of elementary particles to the question of precognition. 15 diagrams 336pp 42s
