

... AID TO
AUDIOMETRY

The Marconi Pure Tone Audiometer is now available. It has been developed for the Ministry of Supply to meet the specification proposed by the Committee on Electro-Acoustics appointed by the Medical Research Council. Each instrument is standardized against N.P.L. determinations so that, from a given patient, substantially comparable results can be obtained with any Marconi Audiometer. The patient, who can be orally instructed through a crystal microphone and high fidelity ear-phones, communicates with the operator via a built-in signal lamp. The sound output over the normal hearing range is automatically corrected for characteristic losses.

THE PURE TONE
Audiometer
Type TF 895
