M. D. WELCH, *Natural History Museum, London, UK*

Reviews Editor: S. J. MILLS

Structures Editor: P. LEVERETT

Production Editor: H. C. KERBEY

MINERALOGICAL SOCIETY

[Registered Charity No. 233706]

Officers and Council for 2017

President: H. Downes

Treasurer: J. M. Adams *P.R.O.:* Philip Pogge von Strandmann *General Secretary:* J. M. Horák

Principal Editors of the Magazine: R. H. Mitchell, P. A. Williams

Principal Editor of 'Clay Minerals': G. E. Christidis

Ordinary Members of Council: M. Anand, A. Bird, S. Broom-Fendley, C. Corkhill, C. Greenwell, J. Harvey, H. Hughes, S. Mills, C. Petrone, V. Phoenix, M. Tyrer, A. Walker, C. Warren, D. Wray, M. Widdowson

Office address: 12 Baylis Mews, Amyand Park Road, Twickenham TW1 3HQ, UK

Front cover picture: Two euhedral crystals of vein-hosted fluorapatite in back-scattered electron (left) and their cathodoluminescence image (right). Back-scattered electron images show distinct crystal zonation: brighter zones are Sr-enriched and correspond chemically to fluorapatite, darker zones correspond to fluorapatite. Element distribution maps for Sr, Ca, and F illustrate the relative abundances of these elements in individual zones (default colours: blue – very low, green – low, yellow – medium, orange – high, red – very high). In the cathodoluminescence image, fluorapatite (Fcp) shows bright yellow-green luminescence while fluorapatite only weak. The host analcime (Anl) without luminescence is penetrated by younger calcite (Cal) veinlets with a strong orange luminescence. See Kropáč *et al.* (this issue).
