**NOTES**  
**ON SOME THERAPEUTIC AGENTS.**

**EUCAINE.**—*A New Local Anæsthetic.*

Eucaine is a synthetic compound allied to cocaine and having a similar chemical composition. Its local anæsthetic action is not unlike that of cocaine, and it has not been found to produce untoward after-effects. The anæsthesia of eucaine develops more slowly than that of cocaine, but lasts longer. In nose and throat surgery, where a large quantity of anæsthetic has occasionally to be used, it is found to act efficiently, and to be without the poisonous effect previously produced in the same patients by similar doses of cocaine.

Owing to the sparing solubility of eucaine in cold water, and to the fact that it freely crystallizes from hot water on cooling, it is necessary that solutions for anæsthetic purposes should be made only at the moment they are required. For this purpose 'Soloid' brand Eucaine Hydrochloride is most convenient. By dissolving one or more in definite quantities of warm water, solutions of any desired strength can be instantly prepared, and the operator is assured of obtaining the full anæsthetic effect of the drug. In laryngological practice eucaine hydrochloride may be used either as a spray or as an injection, in the same strength as cocaine. 'Soloid' brand Eucaine Hydrochloride is supplied in bottles of 25, 1 gr. at 1s. 8d., and 5 gr. at 7s. per bottle.

**RED GUM.**—*Styptic, Antiseptic, and Astringent.*

Red Gum, an exudation from the Australian *Eucalyptus rostrata*, is a mild styptic and antiseptic, and an excellent local and general astringent. The *Practitioner* reports: "When a Red Gum 'Tabloid' is allowed to dissolve in the mouth, the continuous action of the drug on the throat is fully secured. Great care has been exercised so to adjust the relative proportions of the ingredients that the full therapeutic effect of the drug may be obtained without offending the palate or affecting the appetite." 'Tabloid' brand Red Gum is supplied in handsomely graven metal boxes of 30 at 5d., and in bottles of 100 at 1s. each.

**TAR.**—*Antiseptic, Astringent.*

In a paper entitled "A Mode of Administering Tar," which appeared in the *Medical Press and Circular*, a distinguished physician reports as follows: "I have recently had my attention called to 'Tabloid' Tar, one grain, and this, I think, constitutes by far the best mode of administering the drug. Each contains the whole of the constituents of tar and is palatable, and speedily disintegrates. The new mode of administration is three or four every four hours, but a better plan is to suck one frequently—in fact, every time the cough is troublesome." 'Tabloid' brand Tar (1 gr.) supplied in bottles of 50 and 100 at 5d. and 9d. each.
