

Call for
nominations

**ECOLOGY INSTITUTE
PRIZES 1992**
in the field of Marine Ecology

Call for
nominations

The international Ecology Institute (ECI) has a staff of 43 ecologists, all of high professional reputation, none of whom receives remuneration. Every year a jury of ECI members selects prize winners among marine, terrestrial or limnetic ecologists. In 1992 prize winners will be selected in the field of marine ecology.

ECI strives to (1) further the exchange of information between marine, terrestrial and limnetic ecologists; (2) compensate for the lack of balance between analysing and synthesizing research efforts and thus help to provide more feedback and critical overview for ecological sciences; (3) draw the attention of scientists, administrators, politicians and the general public to important issues resulting from ecological research; (4) assist in finding a long-term compromise between the increasingly destructive potential of modern industrial societies and the need for defining and applying measures to protect nature, commensurate with achieving and sustaining the highest possible living standard for man.

The winner of the ECI Prize is requested to author a 200-300 page book, to be published by ECI in the series 'Excellence in Ecology' (EE) and to be made available world-wide at cost price. A considerable number of books are donated to libraries in Developing Countries. EE's concept is different from that of textbooks. In addition to reviewing a certain field of knowledge, it gives the authors a chance to express their *personal* views on important ecological issues, to interpret current scientific knowledge on the basis of their own experience and insight, and to tell us what, in their opinion, should be done in the future.

A second prize may be awarded honouring a young (not older than 40 years) ecologist who has conducted and published results of uniquely independent, original and/or challenging research representing an important scientific breakthrough: the **IRPE Prize** (International Recognition of Professional Excellence); the IRPE Prize is endowed with a stipend of US\$750.

PREVIOUS PRIZE WINNERS: 1986 Marine Ecology: Tom Fenchel, Helsingør, Denmark; Colleen Cavanaugh, Cambridge, MA, USA - IRPE PRIZE; 1987 Terrestrial Ecology: Edward O. Wilson, Cambridge, MA, USA; 1988 Limnetic Ecology: Gene E. Likens, Millbrook, NY, USA; 1989 Marine Ecology: Robert T. Paine, Seattle, WA, USA; 1990 Terrestrial Ecology: Harold A. Mooney, Stanford, CA, USA

SELECTION PROCEDURES FOR ECI and IRPE PRIZE:

Nominations are welcome from all research ecologists. They should reach the Chairperson of the ECI Jury (see below) before 31 July 1992. Eligible are all ecologists engaged in scientific research (except ECI's director and the Jury's chairperson; jury members nominated will be replaced by other ECI members). The Jury will select the Prize Winner using the nominations received, as well as their own knowledge of top performers, and their own professional judgment.

ECI MARINE ECOLOGY JURY 1992:

**Chairman: J.D. Costlow, Duke University Marine
Laboratories, Pivers Island, Beaufort, NC 28516-9721, USA**
N.S. Fisher, New York, USA; J. Gray, Oslo, Norway;
E.E. Naylor, Menai Bridge, UK; S.W. Nixon, Narragansett,
USA; G.G. Polikarpov, Sevastopol, USSR;
A. Zhirmunsky, Vladivostok, USSR

*A new international journal presenting important
new information on our climate*

CLIMATE RESEARCH

Interactions of Climate with Organisms,
Ecosystems, and Human Societies

Climate is a major determinant in the evolution and manifestation of life. Modern human societies have become capable of changing the global climate. The investigation of climate dynamics, and the assessment and control of human impacts, are among the greatest challenges facing present and future generations.

CLIMATE RESEARCH evaluates, selects and disseminates important new information in these vital research areas. Founded by Professor Otto Kinne – creator of other leading international journals – CLIMATE RESEARCH is edited by a team of worldwide acknowledged experts and published by Inter-Research. Editors, Editorial Advisors and publisher are committed to achieving the highest possible scientific and technical standards.

Coverage: Basic and applied research devoted to all aspects of climate – present, past and future; effects of human societies and organisms on climate; effects of climate on our ecosphere. In particular, CLIMATE RESEARCH invites papers concerned with:

- Interactions of climate with organisms, populations, ecosystems, and human societies.
- Short- and long-term changes in climatic elements: humidity and precipitation, temperature, wind velocity and storms, radiation, carbon dioxide, trace gases, ozone, UV-radiation.
- Methodological aspects of model development and application.
- Climate effects on biotic diversity. Species extinction.
- Historical case studies (paleoecology, paleoclimatology).
- Analyses of extreme climatic events, their physico-chemical properties and their time-space dynamics. Climatic hazards.
- Land-surface climatology. Soil degradation, deforestation, desertification

Focal points of applied research are: climate effects on agriculture, forestry, fisheries and aquaculture; surface and groundwater quality and supply; pests and pest control; urbanization and economic developments; environmental protection; human health.

Subscription Information

Vol. 1 (3 issues) is scheduled to be published in 1990/91. Annual rate: DM 285 including postage, handling and insurance. Air mail costs are available upon request.

Publisher: Inter-Research, PO Box 1120, W-2124 Amelinghausen, Germany; Tel. (0 41 32) 7 27;
Fax (0 41 32) 88 83

Oceanus

"For anyone who loves the sea and whatever moves upon it, *Oceanus* seems to me a 'must'. It is written for the layman, but its articles carry the authority of that great research institute at Woods Hole."

SCIENCE EDITOR, NEW YORK TIMES

Published quarterly by the Woods Hole Oceanographic Institute, *Oceanus* explores a wide range of issues related to the world's oceans. It contains original research reports by the world's leading marine scientists, all edited for the educated lay reader. The journal is rich with full colour and deep-sea photography, clearly illustrated articles and comprehensive diagrams. With its reputable editorial board and original research reports, *Oceanus* is undoubtedly the most comprehensive journal of its kind available.

Subscription

Volume 35, 1992 published quarterly in March, June, September and December: £25 for individuals; £47 for institutions; £18 for students; airmail £14.50 per year extra ISSN 0029-8182

Cambridge Marine Biology

Coastal Marine Zooplankton

A Practical Manual for Students

C. D. TODD and M. S. LAVERACK

This student's manual provides an original photographic guide to representative forms of the major groups of marine zooplankton.

£32.50 net HB 0 521 40036 8 120 pp.
1991

£11.95 net PB 0 521 40918 7

Deep-Sea Biology

A Natural History of Organisms at the Deep-Sea Floor

J. D. GAGE and P. A. TYLER

A comprehensive account of the natural history of the organisms associated with the deep-sea floor, and examines their relationship with this remote and inhospitable environment.

£80.00 net HB 0 521 33431 4 520 pp.
1991
