HOUSE-FLIES AND HOW THEY SPREAD DISEASE

By C. G. HEWITT, D.Sc., Dominion Entomologist, Ottawa, Canada.

Cambridge Manuals Series. Cloth, 1s. net; leather 2s. 6d. net.

"This little book gives an excellent description of the anatomical structure, the life history, and the breeding habits of the common house-fly. There is also a good account of the parasites and natural enemies of the fly, which enables us to realise what becomes of the hordes of flies, incidental to a hot summer, when cold weather commences. ... The measures necessary to control the propagation of flies form the subject of a final chapter."—*Journal of the Royal Sanitary Institute*

"The little book here under notice ... is of really fascinating interest. It deals with a subject which is daily being regarded as of increasing importance in the prevention of disease. ... The arrangement and descriptions are scientific and exact."—*Medical Officer*

THE PSYCHOLOGY OF INSANITY

By BERNARD HART, M.D. (LOND.), Lecturer in Psychiatry, University College Hospital Medical School; Medical Superintendent, Northumberland House Asylum.

Cambridge Manuals Series. Cloth, 1s. net; leather 2s. 6d. net.

"In this little work ... the author has briefly presented in lucid readable form the more important recent developments in abnormal psychology which have yielded results of fundamental importance or which have acquired a satisfactory claim to recognition. In this book the author, after briefly reviewing the history of insanity, goes on to explain what is meant by the psychological conception, and then arranges the subject-matter of the book in such a way that the three successive steps of the method of science appear in logical order. ... An earnest attempt has been made to lay the essential features of this interesting section of science concisely before the reader, and an excellent groundwork has been prepared upon which to build a more extensive knowledge of the subject."—*Asylum News*
