The Dilemma of Narcissus

Louis Lavelle

'What Narcissus saw in the spring was not himself but a reflection of himself, his true self being nothing but his act of knowing and loving; and this is necessarily unknowable. So man must be content to forget himself and participate in the Reality which transcends him both without and within.'

Louis Lavelle, a noted Christian Existentialist, sees 'participation emerge as the answer to this problem, while the enemy is seen to be Narcissus' problem—self-love'. The work concludes with a portrait of the mature soul, in whom through the discipline of participation, being, knowledge and love are perfected, and virtually indistinguishable.

Value and Reality

The Philosophical Case
for Theism

A. C. Ewing

This is a major work by one of the best-known philosophical writers of today, representing the culmination of some twenty-five years' work on the possibility of giving a rational defence of the claims of the religious man, and specifically the theist, in the face of modern criticisms. Dr Ewing's object has been to fulfil what seem to him the two most important tasks for the philosopher in at least the present age, namely, to see if it is still possible to give a rational defence of a genuinely religious point of view, and to do the same thing for an objective ethics, a task he has attempted in other works and continued in this.

George Allen & Unwin

NEW FROM METHUEN

C. A. Mace: Selected Papers

Edited by MARJORIE MACE

This collection of C. A. Mace's lectures and articles indicates the richness and diversity of his work, both as philosopher and psychologist '... in this volume his voice speaks clearly, and it deserves to be heard.' Geoffrey Warnock.
The Times Higher Education Supplement **£6.50**

An Objective Theory of Probability

D. A. GILLIES

The foundations of probability and statistics are highly obscure and many different viewpoints are held by leading experts. This book presents a new rival theory of probability, taking as its starting point von Mises' view that probability theory and should be regarded as a mathematical science. **£3.50**

Topics in Modern Logic

D. C. MAKINSON

A text directed at the undergraduate student of philosophy who wishes to study modern logic beyond the most elementary level, but whose background in mathematics is limited. A balance has been struck between material of a philosophical kind and of a formal kind, in order to reveal connections between the two. **£2.00; University Paperback: 90p**

Logics and Languages

M. J. CRESSWELL

A detailed and original attempt to show that the linguistic gulf between formal or artificial languages and ordinary language is by no means unbridgeable. **September, £4.90**

New University Paperbacks

Reason, Truth and God

RENFORD BAMBROUGH

'The statement is original and so are some of the applications. The literary style is admirable, and the book is very well worth reading by anyone interested in recent developments in philosophical thought... The book also has some very good things to say about ethics and literature.' *Mind* **£1.00**

The Implications of Induction

L. JONATHAN COHEN

'An original and substantial work that makes a major contribution to its subject.'
The Times Literary Supplement **September, £1.90**
