# Natural Hazard Risk Assessment and Public Policy: Anticipating the Unexpected

1982. 89 figures. XVI, 489 pages  
(Springer Series on Environmental Management)  
Cloth DM 129,-; approx. US \$ 51.60  
ISBN 3-540-90645-2

**Contents:** Anticipating the Unexpected as a Focus of Public Policy: Natural Hazards as Public Policy Problems. Natural Hazards Characteristics and Mitigations. Public Policy Approaches to Management of Natural Hazards. – Natural Hazards Risk Assessment and Mitigation Analysis: Methodologies for Hazard Analysis. Natural Hazard Exposure and Loss Analysis. Natural Hazard Mitigation Costs and Impacts. Catastrophic Natural Hazard Occurrences. – Natural Hazards Policy Planning and Administration. – Policy Makers, Stakeholders, and Candidate Public Problems. Constraints on Public Hazards Management Policy Making. Public Policy Alternatives. Index.

This book provides a comprehensive assessment of the risk of property and life loss, which is traceable to the exposure of people and property to nine natural hazards: earthquakes, expansive soils, landslides, tsunamis, severe winds, hurricane winds, storm surges, and riverine flooding. It demonstrates how contemporary tools of risk analysis may be applied to the public policy-relevant investigation of the exposure of people and property to natural and other environmental hazards.

*Natural Hazard Risk Assessment and Public Policy* is a ground-breaking book which presents data on natural hazards at a scale of comprehensiveness and depth not previously reported in the literature. Quantitatively oriented methods and models for assessing future losses arising from hazard exposures are presented and linked to procedures for identification of public problems and specification of alternative problem-solving public policies. Numerous tables and figures are utilized throughout the text which are important in presenting the complex multidisciplinary subject matter. The book will be of high value as a standard reference text for many years. Its extensive bibliographic citations, loss estimates, and building vulnerability algorithms will be of continuing benefit to researchers, students and practitioners in the field of risk analysis, architecture, engineering, natural hazard management, emergency preparedness, actuarial assessment of insurance risk, and public policy analysis.

## **Fiscal Stress in Cities**

Edited by **RICHARD ROSE** and **EDWARD PAGE**

Conflicting pressures to increase public expenditure and restrict taxation have created fiscal stress in many major cities. In Britain the problem is heightened because central government is responsible for so large a portion of local government revenue, but not for its spending. This book attempts to identify the extent, causes and consequences of fiscal stress as it is affecting local government in the 1980s. **£17.50 net**

## **Subsidizing Success**

The Export-Import Bank in the United States Economy

**RICHARD E. FEINBERG**

The author explains the political and economic forces behind Exim's creation in the 1930s, and details its activities to 1980. He analyses the Bank's major credit and guarantee programmes, showing how they fulfil important needs in banking and industry, and demonstrates the role of Exim as an instrument of financial leverage in American diplomacy. **£20.00 net**

## **Social Experimentation and Economic Policy**

**ROBERT FERBER** and **WERNER Z. HIRSCH**

This volume considers the advantages and disadvantages of social experimentation relative to other means of evaluating economic and social policies. The main part of the book provides a review and critical evaluation of the principal social experiments in economics carried out so far in the USA, where this method has been used very extensively. **Hard covers £17.50 net**

*Cambridge Surveys of Economic Literature* **Paperback £6.95 net**

## **Bitter Pills**

Population Policies and their Implementation in Eight Developing Countries

**DONALD P. WARWICK**

What happens when national governments and international donors try to promote birth control in developing countries? This book, the most extensive comparative study ever published, argues that the success of such a programme depends on its relation to larger social and political forces, and on the sensitivity displayed to human concerns. **£17.50 net**

# Regional Studies

**Edited by John B. Goddard**

*Professor of Regional Development Studies,  
University of Newcastle upon Tyne*

*Journal of the Regional Studies Association*

Regional Studies publishes the results of original research on such topics as industrial, retail and office location, labour markets, housing, migration, recreation, transport, communications and the evaluation of public policy, wherever any of these topics has a bearing on urban and regional development. Special review articles on important themes and developments are published when appropriate. The journal is of special interest to economists, geographers, sociologists, planners and policy makers and anyone concerned with urban and regional problems and policies.

Volume 17: February, April, June, August, October and December 1983  
**£46.00** for institutions **£23.00** for individuals

**CAMBRIDGE  
UNIVERSITY PRESS**

The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU, England

## NOTES FOR CONTRIBUTORS TO THE JOURNAL

Authors are requested to submit their original manuscript plus three copies to:

Dr. Brian Hogwood, Editor *Journal of Public Policy*  
Centre for the Study of Public Policy  
University of Strathclyde  
McCance Building, 16 Richmond Street,  
Glasgow G1 1XQ, Scotland

### GENERAL APPROACH

Authors are asked to bear in mind the nature of the readership when writing their contribution. In particular, care should be taken to draw out the implications of the analysis for readers interested in other policy fields, other countries and other disciplines. Jargon specific to a particular discipline should be avoided, and definitions should be provided for words which might be unfamiliar to many readers.

It should be borne in mind that some readers may not be familiar with complex statistical methodology. Accordingly, verbal statements of major findings should always be included. Statistical points can be discussed in notes. Complex statistical or methodological points might merit an appendix. Where you feel that an understanding of the approach used is important in interpreting the substantive findings it might be advisable to explain this in terms comprehensible to the non-specialist in a 'box' which can be placed at the appropriate point in the text.

Similarly, while the editor recognizes the importance of work that proceeds deductively from high-level theoretical abstractions, articles for this Journal will be expected to show clearly what their substantive significance is in terms of issues arising in a governmental context.

### PREPARATION OF MANUSCRIPT

The entire manuscript, including footnotes and references, should be typed double-spaced on one side only of A4 sized paper, with a left-hand margin of at least 1½ inches (4½ cm). Manuscript pages should be numbered consecutively.

The title of the article and the author's name and affiliation should be typed on a separate page at the beginning of the article.

The title only should appear on the next page, which should contain an abstract of the article of not more than 150 words.

### STYLE

*Spelling, capitalization and punctuation* should be consistent within each article. Detailed advice on all matters of style is contained in Judith Butcher's book, *Copyediting*, Cambridge University Press (1975).

*Headings* of not more than two grades should be used and they should be typed on separate lines.

*Tables and Figures* should be numbered consecutively in separate series. Each table or

figure should be typed or drawn on a separate sheet. Every table or figure should have a title or caption and at least one reference in the text to indicate its approximate location.

*Notes* should be avoided wherever possible. Notes should not be used for bibliographic references (see below). When they must occur, notes should be numbered consecutively throughout the article. They will be printed grouped together at the end of the article as endnotes. Notes should be typed in a single list at the end of the paper, starting on a new page.

*Bibliographic citations in the text* must include the author's surname and year of publication and may include page references. Complete bibliographic information for each citation should be included in the list of references at the end of the paper. Examples of correct styling for bibliographic citation where the author's name is mentioned in the text are Alford (1975), Biller (1976, 136-7), May and Wildavsky (1978), Ostrom, Parks and Whitaker (1978) and subsequently Ostrom *et al.* (1978). Otherwise, use, e.g. (Biller, 1976, 136-7).

*References* should be typed in alphabetical order in a single list at the end of the paper, starting on a new page, using the style of the following examples:

- Alford, R. (1975) *Health Care Politics*. Chicago: University of Chicago Press.  
Biller, R. (1976) On tolerating policy and organizational termination: some design considerations, *Policy Sciences*, 7, 133-49.  
Campbell, D. (1971) Reforms as experiments. In F. Caro (ed.), *Readings in Evaluation Research*. New York: Russell Sage.  
May, J. and A. Wildavsky (eds.) (1978) *The Policy Cycle*. Beverly Hills: Sage.

### COPYEDITING AND PROOFREADING OF THE MANUSCRIPT

The editor and publishers reserve the right to copyedit and proof all items accepted for publication. Authors will review their copyedited manuscripts only if substantial changes have been made. The editor may find it necessary to return for rewording or retyping manuscripts which do not conform to the requirements about style and typing.

Galley proofs of articles will be sent to authors for correction of typographical errors only. Authors must notify the editorial office of any corrections within one week of receipt or approval will be assumed.

Submission of an article or other item implies that it has not been published or accepted for publication elsewhere. Authors are responsible for obtaining written permission to publish material (such as quotations or illustrations) for which they do not own the copyright. Contributors of material accepted for publication will be asked to assign their copyrights, on certain conditions, to Cambridge University Press.

Each author will receive 50 offprints of his article without charge. Additional copies may be purchased if ordered at proof stage.
