

## NEW PREPARATIONS.

### **PUMILIO PINE PRODUCTS.** (G. & G. STERN.)

The Oil of Pine has for long been employed with great success in chronic and sub-acute catarrhal affections of the throat and lungs, and at various places on the Continent the "Pine Treatment" is most thoroughly carried out. Messrs. Stern have endeavoured to introduce this method into England, and, moreover, present to the public Pine Products of great purity. We have received some samples from them, which we have submitted to practical examination.

**1. Pumiline Pine Essence.**—In choosing an Oil of Pine for purposes of inhalation, it is most important that the oil to be employed should be free from irritating properties. The Pumilio Pine Essence of Messrs. Stern is prepared from Alpine trees, grown above the snow line entirely, such trees being known to yield not only a larger quantity, but a much purer quality, of Pine Oil than those grown at lower altitudes. The purity of Messrs. Stern's preparation is undoubted, and it contains, probably, fewer hydrocarbon oils than any other similar preparation in the market, which fact alone makes it the best Pine Oil obtainable for inhalation treatment.

**2. Pumiline Pine Extract.**—This is a thick, treacly substance, extracted from the young leaves and shoots, pleasant and agreeable, very soluble in water, and leaving no stain upon linen, &c. It may be used to make pine baths, poultices, or plasters, and is a most valuable external application, especially in rheumatic or gouty conditions.

**3. Pumiline Jujubes.**—Form an agreeable and efficacious application for sore throat (pharyngitis, tonsillitis, &c.).

**4. Pumiline Soap.**—Is a very useful preparation.

All pumiline preparations are powerful deodorizers and disinfectants, and besides their great value as tonic and stimulant applications to mucous membranes, they may be employed efficaciously to counteract the odour from foul secretions of the nose, throat, and lungs (such as caries, ozæna, gangrene, &c.).

We accord to Messrs. Stern's preparations the first place in the market.

### **PASTILLES OF IODOL.** (J. L. BULLOCK & Co.)

These Pastilles, containing each one grain of Iodol, have been prepared according to the directions of Dr. Norris Wolfenden (See *Practitioner*, 1887), and must supplant the favourite but very nauseating pastilles of iodoform, in all cases where the antiseptic and therapeutic properties of iodoform are required, in treatment of pharyngeal and buccal disorders. They are of the greatest therapeutic value, and Messrs. Bullock's Pastilles are an elegant preparation.

### **ESCOLAP MINERAL WATER.** (INGRAM & ROYLE.)

The value of this Natural Mineral Water, as an aperient, has already been well established, and we need only remark that it has a well-deserved reputation. It is, perhaps, not as much employed as it ought to be, for it is one of the most effective and least nauseous of all the natural aperient waters.

**NATURAL CARLSBAD SPRUDEL-SALT.** (INGRAM & ROYLE.)

This has long been a favourite preparation in the treatment of hepatic and gastro-intestinal disorders, and we know of no more valuable aperient preparation to correct the irregularities of those who suffer from such complaints, as the result of leading sedentary and indoor lives.

**VICHY WATER.** (INGRAM & ROYLE.)

The Natural Waters of Vichy are well known, and are successfully employed in various rheumatic and gouty conditions. The various Vichy Waters form agreeable table waters for daily use, and their therapeutic value is undoubted. The addition of a glass of sherry, or a little whisky, renders them very palatable. The "Celestin" water is probably the favourite.
