

Index of Subjects

- 50-ha plot, 365
above-ground biomass production, 239
Africa, 289, 375, 447, 581
African savanna, 163
aggregation, 163
Alcidodes, 651
altitudinal gradient, 279
Amazon, 111, 181
Amazonia, 59
amphibian, 327, 601
Andrioplecta, 651
animal migration, 563
ant-plant mutualism, 15
ape, 433
Apis mellifera, 521
Araceae, 223
area effect, 1
artificial fruit, 319
Atta cephalotes, 645
Atta laevigata, 645
Atta sexdens, 645
Attini, 645
- bait traps, 83
Balizia elegans, 573
bamboo, 59
bat assemblages, 133
bat dispersal, 355
beetles, 25
Berenty, 103
binomial model, 621
biodiversity gradient, 289
biogeographic influence, 279
biomass, 447
biomass allocation, 611
biopedturbation, 581
bird, 319, 581
bird dispersal, 355
bird movement, 547
birth rate, 429
body condition, 239
body fat, 429
body mass, 429
Borneo, 433
Brazil, 437
browsers, 163
Bukit Timah, 323
- Cameroon, 93
canopy, 51, 83, 211, 405
canopy openness, 65
Caribbean, 259, 521
carnivorous plants, 347
Catopsis sessiliflora, 115
Central America, 463, 539
Chamela–Cuixmala, 35
chiropterophily, 133
chronosequence, 35
- climate, 333
cloud forest, 393, 563
cluster, 621
clutch size, 601
Coereba flaveola, 521
coexistence, 441
Coleoptera, 405
Colombia, 111, 223
colony densities, 645
community ecology, 133
community structure, 181
competition, 503
Congo, 447
connectivity, 547
contrast hypothesis, 319
co-occurrence, 557
Costa Rica, 121, 573
Côte d'Ivoire, 269
Crossopteryx febrifuga, 269
crown position, 515
- decomposition, 205, 375
deer, 239
defence, 437
deinhibition, 529
density, 239
Detrended Correspondence Analysis, 223
detritus, 463
deuterium, 563
Didieraceae, 103
dietary overlap, 503
dioecy, 405
Diptera, 51, 405
Dipterocarpaceae, 651
Dipteryx panamensis, 573
disassortative pollination, 393
dispersal, 319, 547
dispersal distance, 529
dispersal mode, 365
dispersion, 111
distance sampling, 239
disturbance, 59
disturbance severity, 195
distyly, 393
diversity, 93
dominance, 83
drinking behaviour, 163
drought, 539
dung beetles, 111
- ecosystem engineers, 645
Ecuador, 305
edge effects, 645
Eleocharis dulcis, 171
elephant, 163, 249
emergent tree, 573
encroachment, 539
endemic, 405
- endemic birds, 421
environmental change, 477
environmental gradient, 333
environmental variability, 163
Eremanthus glomerulatus, 631
ergosterol, 205
external feeders, 51
extinction, 421
extrafloral nectaries, 347
- faecal analysis, 503
Fagaceae, 107
feeding guild, 1, 441
Fiji, 491
fine-root biomass, 73, 413
fine-root production, 73
fire, 59, 539
fishes, 463
floral scent, 591
floral visitors, 25
flower abscission, 405
fluctuating asymmetry, 383
fly-pollination, 591
foraging activity, 83
foraging behaviour, 211
foraging ecology, 1
forest cover, 1
forest dynamics plot, 323
forest fragmentation, 323, 547
forest habitat affinities, 365
forest recovery, 259
forest structure, 65, 195, 333
forest-grassland ecotone, 279
fragmentation, 25, 103
French Guiana, 641
fruit set, 521
functional diversity, 289
functional traits, 289
fungus-grower termite, 269
- gall-inducing insects, 631
general flowering, 651
generalist pollination, 405
generalized linear models, 327
geometric morphometrics, 383
germination, 115
germination experiments, 355
germination trials, 529
giraffe, 249
Glossophaginae, 133
grazers, 163
group size, 239
growth, 115
Guadua, 59
gut passage, 355
- habitat differentiation, 491
habitat fragmentation, 645

- habitat selection, 279
 Hawaii, 441
 head triangulation, 437
 hemi-epiphyte, 223
 herbivores, 503
 herbivory, 171, 383, 645
 heterogeneity, 375
Hieronyma alchorneoides, 573
 high mountains, 289
 highland islands, 421
 hollow tree, 269
 holo-epiphyte, 223
 host preference, 223
 hummingbirds, 393
 hunting pressure, 181
Hymenolobium mesoamericanum, 573
 Hymenoptera, 51
- impact, 249
 Indonesia, 107, 413, 433
Inga punctata, 205
 insectivorous birds, 1
 interference competition, 557
 interspecific interactions, 83
 introduced, 441
 invasive, 441
 invasive aliens, 515
 invasive plant, 365
 invasive species, 557
 islands, 491
 Isoptera, 375
- Jamaica, 259
- Kakadu, 171
 kudu, 249
- La Mucuy Bird Observatory, 393
 LAI, 65
 Lamto, 269
 land-bridge islands, 1
 landscape, 327
 layering, 641
 leaf area ratio (LAR), 611
 leaf litter, 205, 323
 leaf size, 383, 573
Lecythis ampla, 573
 lemur, 103, 429, 529
 liana, 333
 Liberian mongoose, 581
 light availability, 477
 line transects, 621
 lowland Bolivia, 333
- macro-invertebrate, 463
 Madagascar, 103, 529
 magpie geese, 171
 Malaysia, 1
 mammal, 581
 Mantel test, 223
 mark-correlation function, 93
 Mexico, 35, 547
 microbial decomposers, 205
 micro-environment, 477
 microsite heterogeneity, 581
- mid-domain hypothesis, 279
 migration, 463
 mimicry, 437
 mineral soil, 73
 monodominance, 641
 montane ecosystems, 289
 morphology, 437
 mortality, 447
 moult, 563
 movement studies, 563
 multi-stemmed trees, 195
Musonyceris harrisoni, 133
 Myristicaceae, 405
 myrmecophyte, 15
 myrmecotrophy, 15
- Nanophyidae, 651
 natural disaster, 429
 natural regeneration, 35
 nearest neighbour distance, 521
 nectar production, 393
 nest surveys, 621
 nested assemblages, 421
 Nicaragua, 539, 563
 niche partitioning, 611
 niche, 249
 nitrate, 305
 nitrogen, 375, 413
 nitrogen fertilization, 73
 nutrient cycling, 375
 nutrient export, 305
 nutrient hotspot, 375
 nutrients, 539
 nyala, 249
- oestrus, 121
 omnivory, 463
 Orchidaceae, 591
 organic layer, 73
- Pacific, 491
 pair-correlation function, 93
 Palenque National Park, 547
Palicourea demissa, 393
 palm, 25, 333
Pan troglodytes, 621
 Pantanal, 319
 parasitoids, 51
 partial self-incompatibility, 521
 patchiness, 375
 peat-swamp forest, 433
Pecari tajacu, 557
 periphyton, 463
 Phanaeini, 111
 photoperiod, 121
 photosynthesis, 147
 Phyllostomidae, 133
 physiology, 147
 pioneer, 355
 piped tree, 269
 pitcher plant, 15
 plant community dynamics, 195
 plant fertilization, 631
 plant water relations, 115
 plant-animal interaction, 347
 plant-soil associations, 147
- plasticine replicas, 437
 playback, 65
 Poisson model, 621
 pollination, 25, 521
 polygynous mating system, 121
 Pongo, 433
 population dynamics, 447, 651
 population fragmentation, 515
 population size, 111
 population structure, 107
 precipitation, 601
 predation, 437
 predation strategy, 15
 predator satiation, 651
 predictability, 121
 pre-dispersal seed predator, 651
 primate biomass, 181
 production source, 463
Propithecus verreauxi, 429
 prosimian, 103
 protected areas, 181
 Puerto Rico, 521
- rain forest, 305, 491, 563
 rainfall, 51, 601
 randomization, 223
 range boundaries, 621
Rattus baluensis, 347
 realized growth rate, 239
 regeneration, 259
 regeneration niche, 107, 115
 regenerative communities, 35
 resilience, 259
 resource conspicuousness, 319
 resource partitioning, 211
 resprouting, 195, 539
 Rift Valley, 289
 root nutrients, 413
- Sabangau, 433
Saccopteryx bilineata, 121
 savanna ecosystems, 503
 savanna types, 601
 scan statistics, 621
 Scarabaeidae, 111
 sclerophyllous savanna, 631
 seasonal reproduction, 121
 seasonality, 133, 477, 563
 seasonally dry tropical forest, 365
 secondary forest, 323
 secondary succession, 35, 477
 seed dispersal, 433, 529
 seed germination, 433, 581
 seed morphology, 115
 seed predation, 581
 seed size, 529, 611
 seed viability, 515, 521
 seedling distribution, 355
 seedling regeneration, 323
 self-compatibility, 591
 semideciduous forest, 327
 sensitivity, 1
 shade tolerance, 195
 shelter builders, 51
 shifting cultivation, 413
Shorea, 651

- shrimp, 463
shrubby savanna, 269
sifaka, 103
skewness, 107
slugs, 441
snails, 441
snakes, 437
soil, 333, 413
soil carbon, 413
soil contrast, 147
soil disturbance, 581
soil fertility, 61
Sovi Basin, 491
spatial gradient, 621
spatial heterogeneity, 181
spatial patterns, 93
spatial scale, 375
spatially restricted dispersal, 529
specialization, 147
species coexistence, 611
species composition, 195, 421
species diversity, 491
species richness, 25
specific leaf area (SLA), 611
sprout, 107
sprouting, 259, 641
stable carbon isotopes, 211
stable-hydrogen isotope, 563
stable-nitrogen isotope, 563
starch, 539
stone oak, 107
stream ecology, 205
structural cues hypothesis, 65
stumps, 259
succession, 195
Sumatra, 107
supporting strategy, 641
suppressive strategy, 641
survey data, 181
Sus scrofa, 557

taproot, 539
Tayassu pecari, 557
temperature, 477
Terminalia oblonga, 573
termite mound, 375
territoriality, 65
Thysanoptera, 405
Tiputini Biodiversity Station, 205
topography, 491
tree allometry, 573
tree cutting, 259
tree growth, 447
tree, 333
tree stem diameter, 515
Triplaris dugandii, 205

trophic level, 563
trophic position, 463
trophic structure, 441
tropical, 205
tropical bat, 121
tropical dry forest, 35, 383, 539
tropical forest, 93, 477, 547
tropical lowland evergreen rain forest, 413
tropical rain forest, 447, 573, 641
tropical streams, 305
tropical trees, 521
Tupaia montana, 347

understorey, 211, 477
ungulates, 503
unpredictability, 601

vegetation change, 477
Venezuela, 393

water availability, 477
West Africa, 601
Western Ghats, 405
wet evergreen, 405
white oak, 107
wood-feeder termite, 269
woodland dynamics, 249
woody savanna, 269
wrens, 65

Fantastic New Titles *in Tropical Ecology*
from Cambridge University Press!

Second Edition

Tropical Ecosystems and Ecological Concepts

Patrick Osborne

\$55.00: Pb: 978-0-521-17734-4: 500 pp.

Fire in Mediterranean Ecosystems

Ecology, Evolution and Management

Jon E. Keeley, William J. Bond, Ross A. Bradstock, Juli G. Pausas, and Philip W. Rundel

\$95.00: Hb: 978-0-521-82491-0: 450 pp.

Management of Freshwater Biodiversity
Crayfish as Bioindicators

Julian Reynolds and Catherine Souty-Grosset

\$99.00: Hb: 978-0-521-51400-2: 350 pp.

Terrestrial Ecosystem Ecology
Principles and Applications

Göran I. Ågren and Folke O. Andersson

\$130.00: Hb: 978-1-107-01107-6: 408 pp.

\$59.00: Pb: 978-1-107-64825-8

Ecology and Conservation of the Sirenia
Dugongs and Manatees

Helene Marsh, Thomas J. O'Shea, and John E. Reynolds III

Conservation Biology

\$135.00: Hb: 978-0-521-88828-8: 520 pp.

\$65.00: Pb: 978-0-521-71643-7

Marine Protected Areas
A Multidisciplinary Approach

Edited by Joachim Claudet

Ecology, Biodiversity and Conservation

\$125.00: Hb: 978-0-521-76605-0: 392 pp.

\$59.00: Pb: 978-0-521-14108-6

Zoo Conservation Biology

John E. Fa, Stephan M. Funk, and Donnamarie O'Connell

Ecology, Biodiversity and Conservation

\$125.00: Hb: 978-0-521-82763-8: 384 pp.

\$55.00: Pb: 978-0-521-53493-2

Insect Ecology
Behavior, Populations and Communities

Peter W. Price, Robert F. Denno, Micky D. Eubanks, Deborah L. Finke, and Ian Kaplan

\$165.00: Hb: 978-0-521-83488-9: 816 pp.

\$85.00: Pb: 978-0-521-54260-9

Environmental Literacy in Science and Society
From Knowledge to Decisions

Roland W. Scholz

\$130.00: Hb: 978-0-521-19271-2: 656 pp.

\$75.00: Pb: 978-0-521-18333-8

Monkeys on the Edge
Ecology and Management of Long-Tailed Macaques and their Interface with Humans

Edited by Michael D. Gumert, Agustín Fuentes, and Lisa Jones-Engel

Cambridge Studies in Biological and Evolutionary Anthropology

\$99.00: Hb: 978-0-521-76433-9: 380 pp.

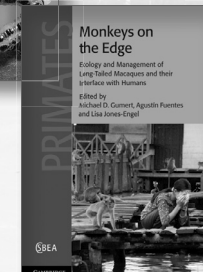

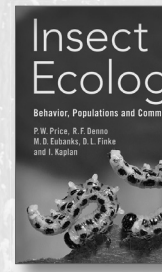

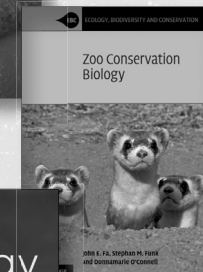

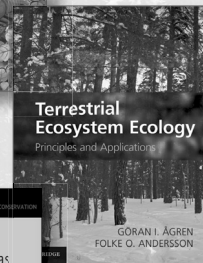

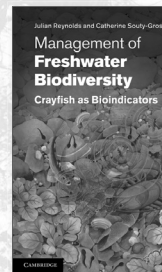

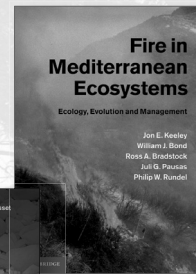

Second Edition

Field and Laboratory Methods in Primatology
A Practical Guide

Edited by Joanna M. Setchell and Deborah J. Curtis

\$115.00: Hb: 978-0-521-19409-9: 456 pp.

\$60.00: Pb: 978-0-521-14213-7

Prices subject to change.

CAMBRIDGE

Environmental Practice

Published for the National Association of Environmental Professionals

Editor

Tim Stretton, *Saint Mary's University, Canada*

Environmental Practice provides a multidisciplinary forum for authoritative discussion and analysis of issues of wide interest to the international community of environmental professionals, with the intent of developing innovative solutions to environmental problems for public policy implementation, professional practice, or both. Peer-reviewed original research papers, environmental reviews, and commentaries, along with news articles and points of view, link findings in science and technology with issues of public policy, health, environmental quality, law, political economy, management, and the appropriate standards for expertise.

CAMBRIDGE
UNIVERSITY PRESS

JOURNAL OF tropical ecology

INSTRUCTIONS FOR AUTHORS

Potential contributors are advised that careful attention to the details below will greatly assist the Editor and thus speed the processing of their manuscripts. Poorly prepared manuscripts will be returned to authors.

Submission

All manuscripts must be submitted online via the website:

<http://mc.manuscriptcentral.com/jte>

Detailed instructions for submitting your manuscript online can be found at the submission website by clicking on the 'Instructions and Forms' link in the top right of the screen; and then clicking on the 'Author Submission Instructions' icon on the following page.

The Editor will acknowledge receipt of the manuscript, provide it with a manuscript reference number and assign it to reviewers. The reference number of the manuscript should be quoted in all correspondence with JTE Office and Publisher.

The submission of a manuscript will be taken to imply that the material is original, and that no similar paper has been published or is currently submitted for publication elsewhere. Papers are first inspected for suitability by the Editor or a Board member. Those suitable papers are then critically reviewed by usually two or three expert persons. On their advice the Editor provisionally accepts, or rejects, the paper. If acceptance is indicated the manuscript is usually returned to the author for revision. In some cases a resubmission is invited and on receipt of the new version the paper will be sent to a third referee. If the author does not return the revised or resubmitted version within six months the paper will be classified as rejected. Final acceptance is made when the manuscript has been satisfactorily revised.

Preparation of the manuscript

Authors are strongly advised to consult a recent issue of the JTE to acquaint themselves with the general layout of articles. Manuscripts should be neatly typewritten on A4 paper i.e. 21 cm × 30 cm. Double sided copy is permissible for review purposes, but final submission for publication must be on one side of the paper only. Double spacing must be used throughout, allowing wide margins (about 3 cm) on all sides. Main text pages should be numbered.

When a revised ms is being returned the author is requested to send a copy of the final version on computer disk (Apple Macintosh or IBM compatible PC) together with the hard copy typescript, giving details of the wordprocessing software used (e.g. Microsoft Word, Word or Word Perfect). However, the publisher reserves the right to typeset material by conventional means if an author's disk proves unsatisfactory.

A paper should be prepared using the following format:

Page 1. *Title page.* This should contain (a) the full title, preferably of less than 20 words and usually containing the geographical location of the study; (b) a running title of not more than 48 letters and spaces; (c) a list of up to 10 key words in alphabetical order suitable for international retrieval systems; (d) the full name of each author and their current affiliation; (e) the name of the institution in which the work was carried out; and (f) the present email and postal address of the author to whom proofs should be sent.

Page 2. *Abstract.* This should be a single paragraph, in passive mode, no more than 200 words long, a concise summary of the paper intelligible on its own in conjunction with the title, without abbreviations or references.

Page 3. *et seq.* The main body of the text may contain the following sections in the sequence indicated:

Discussion, (e) Acknowledgements, (f) Literature Cited, (g) Appendices, (h) Tables, (i) Legends to Figures. An extra section between (a) and (b) for Study Site or Study Species might be necessary.

Main headings should be in capital type and ranged left; sub-headings should be ranged left. A *Short Communication* has a title and keywords but no abstract (except what is entered in Manuscript Central) or section headings until Acknowledgements and item Literature Cited.

Acknowledgements should be brief. *Notes* should be avoided if at all possible; any notes will be printed at the end of the paper and not as footnotes.

Scientific names. The complete Latin name (genus, species and authority) must be given in full for every organism when first mentioned in the text unless a standard reference is available which can be cited. Authorities might alternatively appear in Tables where they are first used.

Units of measurement. Measurements must be in metric units; if not, metric equivalents must also be given. The minus index (m^{-1} , mm^{-3}) should be used except where the unit is an object, e.g. 'per tree', not 'tree⁻¹'. Use d^{-1} , mo^{-1} and y^{-1} for per day, per month and per year.

Abbreviations. In general, abbreviations should be avoided. Numbers one to nine should be spelled out and number 10 onwards given in figures. Dates should follow the sequence day-month-year, e.g. 1 January 1997. The 24-hour clock should be used, e.g. 16h15.

Online supplementary material

Supplementary material is not copy edited or typeset but loaded onto CJO exactly as supplied. Supplementary material must be submitted at the same time as the article and must be clearly marked to distinguish it from the main article text.

Authors should ensure that they mention within their article that supplementary material is available on CJO.

Language

All papers should be written in English, and spelling should generally follow *The Concise Oxford Dictionary of Current English*. Abstracts in other languages will be printed if the author so desires together with an abstract in English. All abstracts must be provided by the author.

Literature cited

References to literature in the text should conform to the 'name-and-date' system: e.g. Fleming (1982); (Goh & Sasekumar 1980); Montgomery *et al.* (1981). If a number of references are cited at one place in the text, they should be arranged alphabetically and not chronologically. In the reference list citations should take the forms given below. References with two or more authors should be arranged first alphabetically then chronologically. The names of cited journals should be given in full. Certain foreign language citations may be translated into English, and this should always be done where the English alphabet is not used (e.g. Chinese, Russian, Thai).

FLEMING, T. H. 1982. Foraging strategies of plant-visiting bats. Pp. 287–325 in Kunz, T. H. (ed.). *Ecology of bats*. Plenum Press, New York. 425 pp.

GOH, A. H. & SASEKUMAR, A. 1980. The community structure of the fringing coral reef, Cape Rachado. *Malayan Nature Journal* 34:25–27.

MONTGOMERY, G. G., BEST, R. C. & YAMAKOSHI, M. 1981. A radio-tracking study of the American manatee *Trichechus inunguis* (Mammalia: Sirenia). *Biotropica* 13:81–85.

WHITMORE, T. C. 1984. *Tropical rain forests of the Far East*. (second edition). Oxford University Press, Oxford. 352 pp.

Use the following as contractions in text: 'pers. obs.', 'pers. comm.'; but 'unpubl. data', 'in press'. Authors should double-check that all references in the text correspond exactly to those in the Literature Cited section.

Tables and figures

Tables should be typed, together with their titles, on separate pages. Column headings should be brief, with units of measurement in parentheses. Vertical lines should not be used to separate columns. Avoid presenting tables that are too large to be printed across the page; table width must not exceed 80 characters, including spaces between words, figures and columns. Each table should be numbered consecutively with arabic numerals. The author should indicate in the text where tables and figures are to be inserted; all tables and figures must be mentioned in the text.

Authors should ensure that all figures, whether line drawings or photographs, clarify or reduce the length of the text. The preferred graphics package is Freehand, but many others may be accepted. Please indicate file format and graphics software used for originating artwork files. Typefaces should be restricted to Monotype, Adobe and Bitstream font libraries. High resolution figures should be supplied as TIFF or EPS files, but never as Postscript files. Line drawings should be scanned at 1200 dpi and use only conventional Postscript files. Halftones to be scanned at 600 dpi with the preset dot range from 1–96%. If you wish to compress the files use lossless compression package software such as the LZW compression package.

Proofs

When pdf proofs are received they should be corrected carefully and returned to the publisher without delay. Errors remaining in these first proofs after the author has checked them are the author's responsibility. Any further editorial changes, apart from minor grammatical and syntactical improvements, will be communicated to the author before second proofs are prepared. Ensure that the editorial office knows of changes in your address.

Offprints

Upon publication the corresponding author will automatically receive a pdf of their article from Cambridge University Press. Authors will be offered the opportunity to order paper offprints by using the form supplied at proof stage.

Copyright

Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper. Authors receiving requests for permission to reproduce their work should contact Cambridge University Press for advice.

Business correspondence

Correspondence concerning offprints, copyright, back numbers, advertising and sales to libraries should be addressed to the publishers: Journals Department, Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, UK or Cambridge University Press, 32 Avenue of the Americas, New York, NY 10013–2473 USA.

CONTENTS

The influence of microhabitat, moisture and diet on stable-hydrogen isotope variation in a Neotropical avian food web K. C. Fraser, E. A. McKinnon, A. W. Diamond & L. Chavarría	563
Allometry of emergent tree species from saplings to above-canopy adults in a Costa Rican rain forest D. A. King & D. A. Clark	573
Soil disturbance by vertebrates alters seed predation, movement and germination in an African rain forest A. E. Dunham	581
Sapromyophily in the native orchid, <i>Bulbophyllum variegatum</i> , on Réunion (Mascarene Archipelago, Indian Ocean) L. Humeau, C. Micheneau, H. Jacquemyn, A. Gauvin-Bialecki, J. Fournel & T. Pailler	591
Variable reproductive strategies of an African savanna frog, <i>Phrynomantis microps</i> (Amphibia, Anura, Microhylidae) M. Hirschfeld & M.-O. Rödel	601
Trade-offs between growth and survival of non-pioneer light-demanding tree seedlings in tropical forest of Hainan Island, China W. Yang, F. Liu, L. Zhou, S. Zhang & S. An	611
Identifying hotspots of chimpanzee group activity from transect surveys in Taï National Park, Côte d'Ivoire C. Y. Kouakou, C. Boesch & H. S. Kuehl	621
Abundance of gall-inducing insect species in sclerophyllous savanna: understanding the importance of soil fertility using an experimental approach P. Cuevas-Reyes, F. T. De Oliveira-Ker, G. W. Fernandes & M. Bustamante	631
<i>Short Communications</i>	
A new case of neotropical monodominant forest: <i>Spirotropis longifolia</i> (Leguminosae-Papilionoideae) in French Guiana É. Fonty, J.-F. Molino, M.-F. Prévost & D. Sabatier	641
Leaf-cutting ants proliferate in the Amazon: an expected response to forest edge? C. Dohm, I. R. Leal, M. Tabarelli, S. T. Meyer & R. Wirth	645
Abundance of insect seed predators and intensity of seed predation on <i>Shorea</i> (Dipterocarpaceae) in two consecutive masting events in Peninsular Malaysia T. Hosaka, T. Yumoto, Y.-Y. Chen, I.-F. Sun, S. J. Wright & N. S. Md. Noor	651
Index of Subjects	657
Index of Authors	661
