This practical manual provides a comprehensive yet concise guide to state-of-the-art molecular techniques and their applications. It starts with an overview of the essential principles of molecular techniques, followed by separate chapters detailing the use of these techniques in particular tissues and organs, and describing recommended treatment plans. Each chapter covers the tests available, their advantages, limitations, and use as diagnostic and prognostic tools, with key learning points at the end of each topic. Using both histologic and cytologic samples, it discusses how to interpret test results in a pathologic context and enables trainees and practicing pathologists to gain an in-depth understanding of molecular diagnostic techniques and how to incorporate them into routine diagnostic practice. Aiding the daily practice of refining diagnosis, as well as offering a didactic approach, this book is an essential reference for practicing pathologists and cytopathologists as well as trainees in pathology.

- Offers a system-specific molecular approach in tissues and cytological preparations and covers current and future trends in molecular pathology to familiarize pathologists and cytopathologists with molecular diagnostic and prognostic criteria
- Describes the application of molecular techniques in diagnostic histopathology, cytopathology and clinical management
- Each chapter ends with a set of key learning points, offering a summary as well as a learning tool to surgical pathologists and cytopathologists

## CDC/SHEA Outbreak Response Training Program (ORTP)

Concise, evidence-based and expert-led guidance and implementation strategies for incident management of facility and emerging pathogen outbreaks.

Guidance will be derived from CDC and public health prevention guidelines and tool kits, implementation tools, expert consensus, and best practice recommendations that address preparedness and response to infectious diseases outbreaks.

Books and Journals from  
Cambridge University Press

The Cambridge Medicine programme focuses its book publishing in a defined set of core clinical areas with our great strength in the clinical brain sciences. Other specialties of significant focus include reproductive medicine/obstetrics and gynaecology, anaesthesia and critical care, emergency medicine and pathology.

Our journals programme covers a broad spectrum of medical disciplines including emergency and disaster medicine, epidemiology and infectious diseases, biomedical science, genetics, nutrition, mental health and psychiatry, and neuroscience.

We partner with many learned societies including The Society for Healthcare Epidemiology of America, the Neuroscience Education Institute, and the Royal College of Obstetricians and Gynaecologists.
